DETAILED ACTION

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 8, 14, 19 20, and 29 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,798,743 to Ma et al.

With regard to claim 1, Ma et al teach MAC 702/704 and 810/820, CPU interface (col 4 lines 40+), upstream flow module 802/804 wherein the QOS is described in col 11 lines 43+; bridging and routing module 808, wherein wrapping occurs as described in col 14 lines 57+; Qos occurs in member 810; downstream flow module 810, wherein member 810 classifies the packets according to rules. Although a bus is not explicitly mentioned, the examiner believes that one of ordinary skill in the art would recognize the obviousness of using busses for members 701/720 of Ma et al. The examiner notes that no patentable weight has been given to the use of a cable modem, since although it is recited in the preamble, it is not referred to in the body of the claim.

With regard to claim 2, scheduling occurs in the upstream flow module.

With regard to claim 3, these three functions occur in Ma et al.

With regard to claims 4 - 5, see discussion of QOS above.

With regard to claim 6, DOCSIS would be an obvious protocol to use.

With regard to claim 7, see memory 814.

Application/Control Number: 09/651,070

Art Unit: 2661

With regard to claim 8, see interfaces 801 and 820.

With regard to claim 14, the examiner takes Official Notice that leaky bucket is a well known algorithm in the art.

With regard to claim 19, Ma teaches flow module 702/704 (col 9 lines 58+), memory (access list verification) 706, router 708, and downstream flow module 710. Although busses are not explicitly stated to carry the data *to* and *from* the router, the examiner the examiner notes that the bus 15 in figure 4 would make this obvious.

With regard to claim 20, the communication chain shown between members 710 and 711 is linear.

With regard to claim 29, members 702/704 are a MAC equivalent, as are members 710/720; member 704 is a network functions module; QOS in the upstream flow module is discussed in col 11 lines 10+ and 43+; FIB 708 is an obvious equivalent of a bridging and routing module; flow management of the packet is discussed with respect to member 704; wrapping is discussed in col 14 lines 57+. Again, though a bus is not explicitly stated to carry the data *to* and *from* the router, the examiner notes that the bus 15 in figure 4 would make this obvious.

With regard to claim 30, the QOS performs a rate shaping function.

With regard to claims 31 - 32, the examiner takes Official Notice that leaky bucket is a well known algorithm, and that priority encoding is a well known method for implementing this algorithm.

3. Claims 19 – 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,816,457 to Bahattab.

Application/Control Number: 09/651,070 Page 4

Art Unit: 2661

With regard to claim 19, Bahattab teaches flow module 101, memory 202 (fig 2), router (switch) 103 in communication with 101 and its associated memory; downstream flow module 102-1; wherein the statistics compiled in col 6 lines 55+ are an obvious variation of performing QOS; and further, Official Notice is taken that busses are typically used to carry information to and from a router core member such as 103.

With regard to claim 20, note the use of upstream and downstream flow modules, and also that the information flow through the router 100 is linear.

- 4. Claims 9 13, 15 18, 21 28, and 33 39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten to include the limitations of the base claims and any intervening claims.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Blount whose telephone number is 571 272 3071. The examiner can normally be reached on M-F 9:00 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Chau Nguyen, can be reached on 571 – 272 - 3126. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
